

Warenius H. *Metabolic Killing of Mitosis Addicted Cancer Cells by Targeting Aerobic Glycolysis: A New Achilles Heel of Cancer.* *J Cell Signal.* 2025;6(3):109-118.

**Appendix: Video Photomicrography Appearances Cancer Cell Death**

The clip below shows synchronous Time Lapse Exposures of H460 Non-small cell followed in parallel over 90 hours after plating of 100 exponentially growing cells: **A.** LEFT HAND PANEL untreated cells **B.** RIGHT HAND PANEL cells exposed to 200  $\mu$ M THR-53 (See legend to Figure 3 for Structure).

H460 cells die after going through a single mitotic division terminating in a failed cytokinesis.
