Suppl. Fig. 1

Supplemental Figure 1. A-NK cells primed with nM IL-2 and restimulated with pM IL-2 maintain prolonged expression of both IL-2R α and IL-2R β . Primed A-NK cells and NA-NK cells were cultured in 0.22, 22 or 222 nM IL-2 for 14 days. At the end of the culture period, surface expression of IL-2R α and IL-2R β was assessed by flow cytometry. Presented data are percentages of A-NK and NA-NK cells expressing each receptor.
